Water, Agriculture and Society in South India

Visit a Dynamic and Diverse Region

This Winter Session study abroad will bring 10-15 students to southern India to learn about issues at the intersection of water, agriculture and society. Visit leading agricultural and engineering universities, meet governmental officials and nonprofits, and--most importantly--learn directly from farmers, livestock operations, fishers, and aquaculturalists in the region.

This field-based course is an extraordinary opportunity for students in many fields of study, including: water management, biological systems engineering, geography, global food security, agricultural economics and leadership, international studies, natural resources and sustainability.
